

Craneway Doors

Craneway doors are designed for efficient access of overhead cranes and their loads. The load doors are either a swinging door or a bottom supported sliding door, power or manual operated and can be manufactured to meet several size requirements. The craneway door is hinged at the top of the header and swings up and in, allowing the crane to pass underneath it. Our factory installation of weatherseals, hardware, operators and electrical equipment insures quality and facilitates efficient field assembly and installation.

Design

- Fabricated from structural steel sections and cold formed steel grits
- Heavy duty cables and double drive operator chains increase safety when top door section is lifted
- Automatic magnetic brake holds door in open position
- Automatic latching lock arms brace the door when closed

Versatility

- Doors can be manufactured in sizes up to 125 feet wide by 30 or more feet high
- Custom designed to fit around the crane rail
- Flexibility in siding material choice used to cover the door section

Durability

- Built resilient against strong wind loads due to the system's elevation
- Secure operating movement
